SUMMARY

Senior Software Engineer with 7+ years of experience building and evolving web applications and backend services. Strong expertise in TypeScript, JavaScript, React, Next.js and Node.js, with hands-on experience in microfrontend architecture, system design, authentication, testing and technical decision-making. Currently working at Mercado Libre on critical authentication systems and frontend architecture. Hands-on experience with AI-native software development, including agentic coding workflows, AI coding assistants, MCPs, custom skills, plugins and Specification-Driven Development (SDD).

TECHNICAL SKILLS

Languages

TypeScript, JavaScript, Python, SQL

Frontend

React, Next.js, React Native, Redux, Microfrontends

Backend

Node.js, Express, REST APIs, GraphQL

Architecture & Engineering

System Design, Software Architecture, Authentication & Authorization, API Design,
Feature Flags, Technical Design

Testing & Quality

Jest, Cypress, E2E Testing, Unit Testing, Visual Regression Testing, Code Review

AI-Native Development

AI Coding Assistants, Agentic Development, Claude Code, OpenAI Codex,
MCP (Model Context Protocol), Custom AI Skills, AI Plugins,
Specification-Driven Development (SDD)

Observability & Tools

Git, Postman, Kibana, New Relic, Datadog, Chromatic

Databases

MongoDB, PostgreSQL, Mongoose, TypeORM

PROFESSIONAL EXPERIENCE

Mercado Libre – Senior Software Engineer

Aug 2023 – Present

- Designed and evolved frontend architecture for Mercado Libre's authentication ecosystem, covering login, authorization, two-factor authentication and account recovery flows.
- Led the rearchitecture of authentication applications toward a microfrontend architecture, reducing coupling between responsibilities and enabling safer, more incremental migrations.
- Drove the migration of frontend applications from JavaScript to TypeScript, improving type safety and maintainability across critical authentication flows.
- Contributed to technical design and architecture decisions, balancing business requirements, maintainability, migration risk and delivery speed.
- Implemented and validated authentication features including Google Sign-In, using controlled rollouts and rollback strategies to minimize production risk.
- Established testing practices combining unit tests, end-to-end tests and manual business-flow regression testing.

- Participated in security remediation work and code reviews, with emphasis on maintainability, single responsibility and readable, understandable code.

AI-Native Development

- Adopted and evaluated AI-assisted and agentic software development workflows using Claude Code, OpenAI Codex and OpenCode.
- Designed and adapted custom AI skills, MCP integrations and plugins to improve agent capabilities and development workflows.
- Migrated an existing agentic development setup from Claude Code to Codex under a two-day delivery constraint, evaluating model behavior and adapting development workflows accordingly.
- Applied Specification-Driven Development (SDD) to structure AI-assisted implementation of software features.

Widergy — Frontend Mobile Engineer

Mar 2023 – Aug 2023

- Developed white-label mobile applications for utility companies across electricity, gas and water services, enabling customers to manage services, payments and claims through a unified platform.
- Built scalable mobile interfaces using React Native, TypeScript and Redux, supporting multiple client-specific implementations from a shared codebase.
- Integrated REST APIs and implemented navigation flows using React Navigation.
- Contributed reusable components to an internal mobile component library, improving consistency across applications.
- Participated in mobile deployment and release processes across multiple client environments.
- Collaborated with cross-functional Agile teams to deliver product features and improve the user experience across different implementations.

Radium Rocket — Full Stack Engineer

Sep 2019 – Mar 2023 | Rosario, Argentina

- Developed full-stack applications for e-commerce and fintech clients using React, React Native, Node.js, Express, TypeScript and MongoDB.
- Contributed to Qira Global, an agri-commerce platform with multi-role backoffice workflows for administrators, sellers and distributors.
- Contributed to Qira Pagos, a digital wallet platform supporting real-money transactions, building frontend and backend functionality across the product.
- Designed and maintained REST APIs and complex frontend applications, balancing new product requirements with existing system constraints.
- Improved React application performance by reducing unnecessary data fetching and optimizing component rendering and state management.
- Built a WYSIWYG editor for non-technical users and integrated third-party services including Firebase Analytics, AWS S3 and Sentry.
